

Presenting as part of a Joint Tactical Training demonstration

Virtual Fixed-wing Trainer

Made by

www.visim.net

An initial **prototype version** of VFT is displayed here, to demonstrate the simulation capabilities of VSS and Titan. This is a highly simplified trainer intended for joint training experimentation, however the FWT can be vastly expanded for additional training benefit for pilots and other potential participants (ATCs, FAC-As, etc).

The VFT can also be used as a higher fidelity roleplayer option in the **VSS Virtual JTAC Simulator (VJS)**, which features a full 360 degree projection dome and multiple simulated devices for immersive JTAC/JFO/FAC training.

Features of the final Virtual Fixed-wing Trainer include:

- Multi-Function Displays
- AWACS/EWS
- Modular controls and airframes
- Reconfigurable Armament Loadouts and Fuzing
- Optional Dome Projection
- Optional Motion Platform

Users of Virtual Simulation Systems products around the world include:

- US Army
- Australian Defence Force
- UK Ministry of Defence
- European Defence Agency
